Drastic shift in the risk landscape

- **High insurance losses and the stock market slump have decreased global risk capital considerably**
- **Governments and the insurance industry are challenged to provide cover for terrorist risks**
- **Global slowdown has increased credit risk / default rates**
- **Insurance companies are suffering from the past build-up of equity and credit exposures**
- **Banks suffer from the deterioration in their loan portfolios**
- **Aggressive build-up of leverage in the late 1990s looks much too high today (e.g. telecoms)**
- **After Enron & Co., accounting and disclosure have to be taken more seriously**
- **Many pension funds are underfunded: CSFB estimates the level of underfunding of pension funds to total USD 243 bn**

What we expect going forward

Corporates

- **Deleveraging**
- **Closing of pension fund gaps (higher contributions, lower benefits)**
- **Refocusing on core business**
- **Basel II requires increased focus on credit assessment and credit ratings**
- **Management of maturity profile (liability duration and maturity independently)**

Insurers

- **Re-underwriting of insurance risks**
- **Control and management of credit risks**
- **Life insurers: devalued assets vs. high liabilities (guaranteed returns)**

Banks

- **Control and management of credit risks**
- **Management of loan portfolios**
- **Managing reputational risk (conflict of interest)**
- **Preparing for Basel II**

Conclusions

- **Importance of fixed income is rising due to:**
 - Increasing attention paid by investor base (shift in asset allocation)
 - Increasing focus on managing credit risk (reinforced by Basel II)
 - We think deleveraging is unlikely to come via earnings growth, but via rights issues and divestitures → this should favor corporate debt relative to equity
- **Basel II will force banks to rethink their strategy towards taking on credit risk**
- **Sound risk management is becoming a key intangible asset**
